

Vignesh Krishnasamy

About me

I'm working in Amazon as CSA I've great passion towards programming. So, I'm looking for the opportunity to turn my obsession as my profession.

Skill

Angular 9	<div></div>
Flutter	<div></div>
Java	<div></div>
Python	<div></div>

Why a programmer?

"While I used to program, I find a newer version of myself. It gives me peace of mind and solves my tribulations in life too. So obviously, it turns out to be an obsession in my life."

Experience

Phoenix technology - website

It is a complete e-commerce website. I developed the entire website that includes the frontend too. The first time it was built as a typical website. The website was again updated as an e-commerce website and developed using angular. It took me months to complete the project, where I learned more and gained a bunch of experience. On the progress, I started learning the online payment method option and how to handle CRM, trouble tickets, etc.

Sree sakthi engineering college

It is an android application developed for Sree Shakthi Engineering College, and this is the first project I worked on. An appealing project where it took a pretty long time, about six months, and finally released in the play store.

Focus Mart

It is an online grocery delivery website, currently in development for its second update and, already a simple website is launched online. I did the backend work of the website and, it was a piece of cake. While 'the second update of the website is in the process, which is quite interesting where I will have a lot of works to do.

Experience on wrokshop

Sri Krishna Adithya College of Arts

It was the first experience in a workshop. It was a quality experience for managing the students and letting them know the basic concept of cloud computing and teaching them how to move forward to learn more about cloud computing.

Kongu Engineering College

It was my second experience taking the workshop for students at Kongu Engineering College. It was a pretty good experience because I found myself enhanced in teaching students. And the classes were on python for five days workshop.

Experience on Personal work

I am taking care of the backend works for my two portfolios of my friends. It was not much of a job but, we are planning to add a search bar to enhance the user experience.
